

NENÚFAR

Joan Gaspar, 2013

A chromed metal stem supports a system of one, two, or three polycarbonate discs, attached at varying heights and with 120 degrees of separation between. A diffuser with a strip of perimeter LEDs projects the light downwards.

For mounted canopy installation

When the project requires a combination of different Nenúfars, you will have to take into account the total power in watts, the power of the driver, and the wire entry points of the canopy.

The total wattage of the selected Nenúfar elements cannot exceed the max wattage of the canopy's driver. Therefore, you must choose your canopy/driver by the power required. Finally, the number of Nenúfars installed in a single canopy cannot exceed the number of wire entry points of that canopy.

The Nenúfar system allows one to regulate the light (1-10v or DALI)

Examples:

3x Nenúfar 3
3x27W=81W
3 wire entry points
Canopy 100W

3x Nenúfar 1
3x9W=27W
3 wire entry points
Canopy 30W

2x Nenúfar 3, 2x Nenúfar 2, 2x Nenúfar 1
(2x27W)+(2x18W)+(2x9W)= 108W
6 wire entry points
1 canopy de 100W + 1 canopy de 20W

For recessed canopy installation

The ceiling plate accessory is a technical solution that allows you to hide the driver in a false ceiling. Every Nenúfar will require a ceiling plate. For any installation where the driver must be hidden, there are 4 types of drivers based on the power: 20-30-60-100W.
